

GOWSHAK RAJA S

Java Full Stack Developer | Spring Boot | REST APIs | Microservices | Enterprise Automation
Chennai, India | +91 8524972345 | gowshakraja12@gmail.com | [linkedin.com/in/gowshakraja12](https://www.linkedin.com/in/gowshakraja12)

PROFESSIONAL SUMMARY

Java Full Stack Developer with 2 years of experience designing, developing, and maintaining enterprise applications using Java, Spring Boot, Hibernate (JPA), RESTful APIs, React.js, SQL, and MySQL. Proven track record building scalable automation systems, workflow management solutions, and data-driven backend services across manufacturing, quality control, and enterprise operations domains. Hands-on experience delivering production-ready applications involving process automation, real-time monitoring, predictive alerting, barcode/QR integration, and multi-module ERP/MES systems. Familiar with Microservices architecture, Docker, Kubernetes, Git, Maven, Agile Scrum, and CI/CD practices. Strong problem-solving and debugging skills with a track record of collaborating directly with onsite clients on requirement gathering, UAT, and deployment.

TECHNICAL SKILLS

Languages: Java (Core & Advanced), JavaScript, SQL, HQL

Backend: Spring Boot, Spring MVC, Hibernate ORM, JPA, JDBC, J2EE, RESTful APIs, Spring Data JPA, Maven

Frontend: React.js, HTML5, CSS3, JavaScript, JSP, AJAX, Bootstrap, PrimeFaces, JSF (Facelets)

Architecture: Microservices, MVC Pattern, RESTful API Design, Event-Driven Workflows, Business Rule Engines

Databases: MySQL, PostgreSQL, SQL Query Optimization, Database Design, Stored Procedures

DevOps & Tools: Git, GitHub, Gitea, Docker, Kubernetes, Jenkins (CI/CD Basics), Postman, Eclipse, IntelliJ IDEA, VS Code, JBoss Server

Specializations: Workflow Automation, Real-Time Monitoring, Predictive Alerting, Barcode/QR Integration, PDF Processing & Report Generation, Multi-Module Enterprise Systems

Additional Knowledge: Spring Security (Basics), Design Patterns (MVC, DAO, Singleton), Agile Scrum, CI/CD Concepts, Prompt Engineering

PROFESSIONAL EXPERIENCE

Junior Software Engineer | NiraineerAI Innovation Pvt. Ltd., Chennai

Oct 2024 – Present

Working as a Full Stack Developer on a product engineering team, contributing to custom enterprise workflow automation and process management systems. Involved in backend development, REST API design, database design, and frontend integration across multiple production applications in an Agile Scrum environment.

- Designed, developed, and maintained enterprise web applications using Java, Spring Boot, Spring MVC, Hibernate (JPA), React.js, MySQL, and RESTful APIs.
- Developed scalable backend modules implementing business logic, database operations, and REST API integrations for enterprise workflow automation.
- Built and enhanced responsive user interfaces using React.js, HTML5, CSS3, JavaScript, Bootstrap, PrimeFaces, and JSF (Facelets).
- Designed and optimized relational database schemas, SQL queries, stored procedures, and Hibernate ORM mappings to improve application performance.
- Developed RESTful web services enabling seamless communication between frontend applications and backend systems.
- Implemented workflow automation features for machine maintenance, approval processes, consumable management, and enterprise operational modules.
- Developed barcode and QR code integration features to support asset identification and maintenance tracking.

- Built real-time monitoring and predictive alert functionalities to improve operational visibility and proactive maintenance.
- Implemented PDF generation and report management functionality for business documents and operational reports.
- Worked with Git, GitHub/Gitea, Maven, Docker, Kubernetes, Postman, and Jenkins throughout the software development lifecycle.
- Participated in Agile Scrum ceremonies including sprint planning, daily stand-ups, sprint reviews, and retrospectives.
- Collaborated with cross-functional teams to analyze business requirements, troubleshoot production issues, and deliver high-quality software solutions.

KEY PROJECTS

Nixus Manufacturing Management System (Onsite Client Project – Kenya)

Technologies: Java, Spring Boot, REST API, MySQL, ERP, Manufacturing Management

- Developed a centralized ERP-style Manufacturing Management System for a Kenya-based manufacturing company producing plastic pallets and polythene sheet rolls across multiple plants.
- Built production planning, work order management, inventory management, and sales management modules using Java, Spring Boot, Hibernate (JPA), and RESTful APIs.
- Implemented multi-plant inventory tracking with complete material traceability based on material type, grade, color, and plant location.
- Automated manufacturing workflows including washing, palletization, and polythene sheet production with employee, shift, and production tracking.
- Designed BOM (Bill of Materials) and Work Order engines for automated material requirement calculation and production planning.
- Integrated barcode-based tracking for inventory movement and production operations.
- Participated in onsite client discussions, requirement gathering, UAT, and deployment activities in Kenya.

Enterprise Workflow Automation & Document Management System

Technologies: Java, Spring Boot, REST API, Real-Time File Monitoring

- Designed and developed configurable workflow engines to automate multi-level approval processes and digitize business documentation.
- Designed REST APIs for frontend integration and third-party system communication.
- Implemented role-based workflow routing and status tracking across departments.
- Developed document upload, validation, and approval modules with real-time file monitoring.
- Built backend services for workflow execution and automated notification management.
- Optimized database performance through indexing and query optimization.

Enterprise Asset Tracking & Reporting System

Technologies: Java, Spring Boot, Hibernate (JPA), REST API, MySQL, Barcode Integration, iTextPDF

- Developed barcode and QR code generation for asset and inventory identification across enterprise operations.
- Implemented barcode scanning services for real-time inventory movement and production tracking.
- Built RESTful APIs for barcode validation and asset information retrieval.
- Integrated barcode workflows with enterprise inventory and production management modules.
- Developed dynamic PDF generation services for reports, invoices, maintenance records, and operational documents.
- Designed reusable report templates across multiple business modules, improving traceability and reporting accuracy.

Quality Control Automation & Vendor Notification System

Technologies: Java, Spring Boot, REST API, Email Integration, Rule Engine

- Built a configurable rule-based QC validation engine that automated inspection checkpoint evaluation against defined quality thresholds.

- Integrated automated email notification service triggering vendor alerts on failed QC checkpoints, replacing manual communication workflows.
- Designed the integration layer between the QC validation module and vendor communication service using decoupled REST API contracts.

Predictive Maintenance & Equipment Monitoring System

Technologies: Java, Spring Boot, Scheduled Jobs, Alert Engine, REST API

- Engineered an equipment health logging service that tracked service history, operational parameters, and breakdown incidents in real time.
- Built a predictive service reminder engine using threshold-based rules and scheduled job triggers, proactively alerting operators before predicted maintenance windows.
- Developed REST APIs for maintenance log retrieval and alert configuration, enabling frontend dashboards and mobile notification integration.

Assembly Tracking & Automated QC Checkpoint System

Technologies: Java, Spring Boot, Barcode Integration, REST API, MySQL

- Implemented barcode-based part identification and validation service for real-time, stage-by-stage assembly tracking across a multi-step production workflow.
- Built a QC checkpoint validation engine that triggered automated inspection reports at each assembly stage, ensuring compliance and reducing manual inspection effort.
- Designed RESTful backend services for barcode scan event ingestion, state management, and checkpoint report generation.

EDUCATION

B.E. – Civil Engineering Saveetha Engineering College, Anna University	2017 – 2021
CGPA: 7.44 / 10.0	
HSC (12th Grade) Kalaimagal Matriculation Higher Secondary School	2017
Percentage: 71%	

CERTIFICATIONS & ADDITIONAL

- Java Full Stack Development
- Domain Exposure: Enterprise Workflow Automation, Quality Management Systems, Predictive Maintenance, Multi-Module ERP/MES, Process Lifecycle Management
